BidReady:

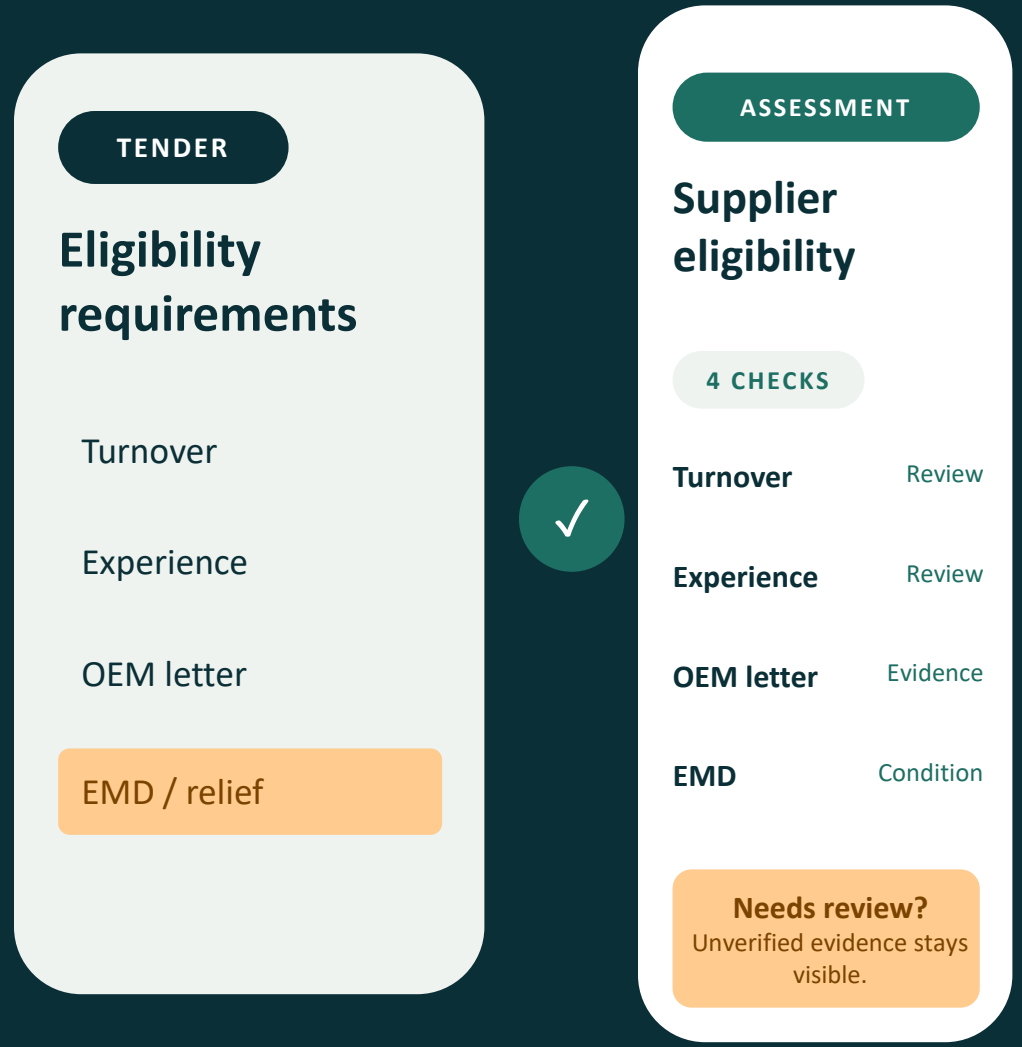

Understand Eligibility Before Investing in a Bid

BidReady helps Indian MSMEs and startups assess whether they appear to meet a tender's configured eligibility criteria.

EVIDENCE-BACKED PRE-SCREENING

TINYFISH API WORKFLOW

Not a bid submission tool. Not a guarantee of acceptance or award.

Finding a tender is easy; checking eligibility is the hard part

Requirements sit across the notice, bid document, annexures and conditional relaxation clauses.

01 DISCOVERY

“Laptops for institutional buyers”
Tender title • Buyer • Link

A listing tells the supplier an opportunity exists. Discovery metadata is not eligibility evidence.

THE GAP

Tender clauses
Thresholds • periods • exceptions

Supplier records
Financials • orders • OEM letters

Supporting evidence
Certificates • completion proof

Eligibility means comparing all three.

03 DECISION WITH LIMITS

Known gaps

Conditions

Manual review

A clear bid / no-bid view.

Eligibility is supplier-specific; the actual tender clause remains the source of truth.

ILLUSTRATIVE CASE

A supplier must verify four eligibility requirements before deciding to bid

HYPOTHETICAL SCENARIO

Northstar IT Supplies

Small reseller • Laptops and printers

TURNOVER
Below example threshold

SIMILAR ORDERS
2 completed orders

OEM LETTER
Available; scope to verify

MSE STATUS
Certificate available

1 Turnover

Illustrative: average annual turnover ≥ ₹50 lakh

BELOW THRESHOLD

2 Prior experience

Illustrative: 3 similar completed orders

ONE ORDER GAP

3 OEM authorization

Authorization for the offered brand / product

SCOPE UNRESOLVED

4 EMD / relaxation

Illustrative EMD: ₹1.5 lakh unless relief applies

CONDITION UNRESOLVED

Recognition status alone does not prove a relaxation applies. BidReady verifies the tender clause, supplier evidence and remaining conditions.

THE SOLUTION

BidReady converts tender requirements into a structured eligibility assessment

01

Discover

Find tender candidates

02

Extract

Structure the four criteria

03

Compare

Match supplier profile with proof

04

Assess

Explain the result and the gaps

REUSABLE SUPPLIER PROFILE

Turnover by year • Similar orders • OEM authorization • EMD readiness • Recognition documents

Initial focus: IT hardware
Laptops, printers, networking

Each assessment stays tied to the selected tender and the source clauses supporting each criterion.

Tender eligibility lives on live, messy web pages. TinyFish reads them

SEARCH API

Discover

`GET api.search.tinyfish.ai`

Finds tender candidates from a focused query: titles, snippets and URLs.

FETCH API

Retrieve

`POST api.fetch.tinyfish.ai`

Pulls page content from known tender URLs and returns errors we can route.

AGENT API

Extract

`POST agent.tinyfish.ai/v1/automation/run`

Navigates the source when needed and extracts schema-bound fields: criterion, clause heading, quote and URL.

TinyFish reads the live web. Our code decides: evidence validation and deterministic rules sit outside the model.

USER EXPERIENCE

BidReady makes eligibility gaps and missing evidence easier to see

MANUAL REVIEW

The supplier assembles the picture across documents.

- Search the notice, main document and annexures separately
- Cross-check each condition against supplier records
- Follow references to exceptions and required proof
- Reconcile what is known, missing or still ambiguous

BIDREADY-ASSISTED

The assessment surfaces the comparison and evidence.

- Gather four configured criteria into one view
- Link decisive findings to a clause heading, quote and URL
- Show supplier facts, missing documents and conditions
- Route incomplete or untraceable evidence to manual review

BidReady supports the supplier's bid / no-bid decision. It does not replace the official tender review.

Designed to reveal evidence gaps before detailed bid preparation; the supplier still reviews the complete tender.

Six stages take a tender from discovery to an eligibility report

TINYFISH

1

Search

Find tender candidates

TINYFISH

2

Fetch

Retrieve known source content

TINYFISH

3

Extract

Navigate if needed; structure fields

OUR CODE

4

Validate evidence

Check heading, exact quote and URL

OUR CODE

5

Evaluate rules

Compare four criteria with the profile

UI

6

Present report

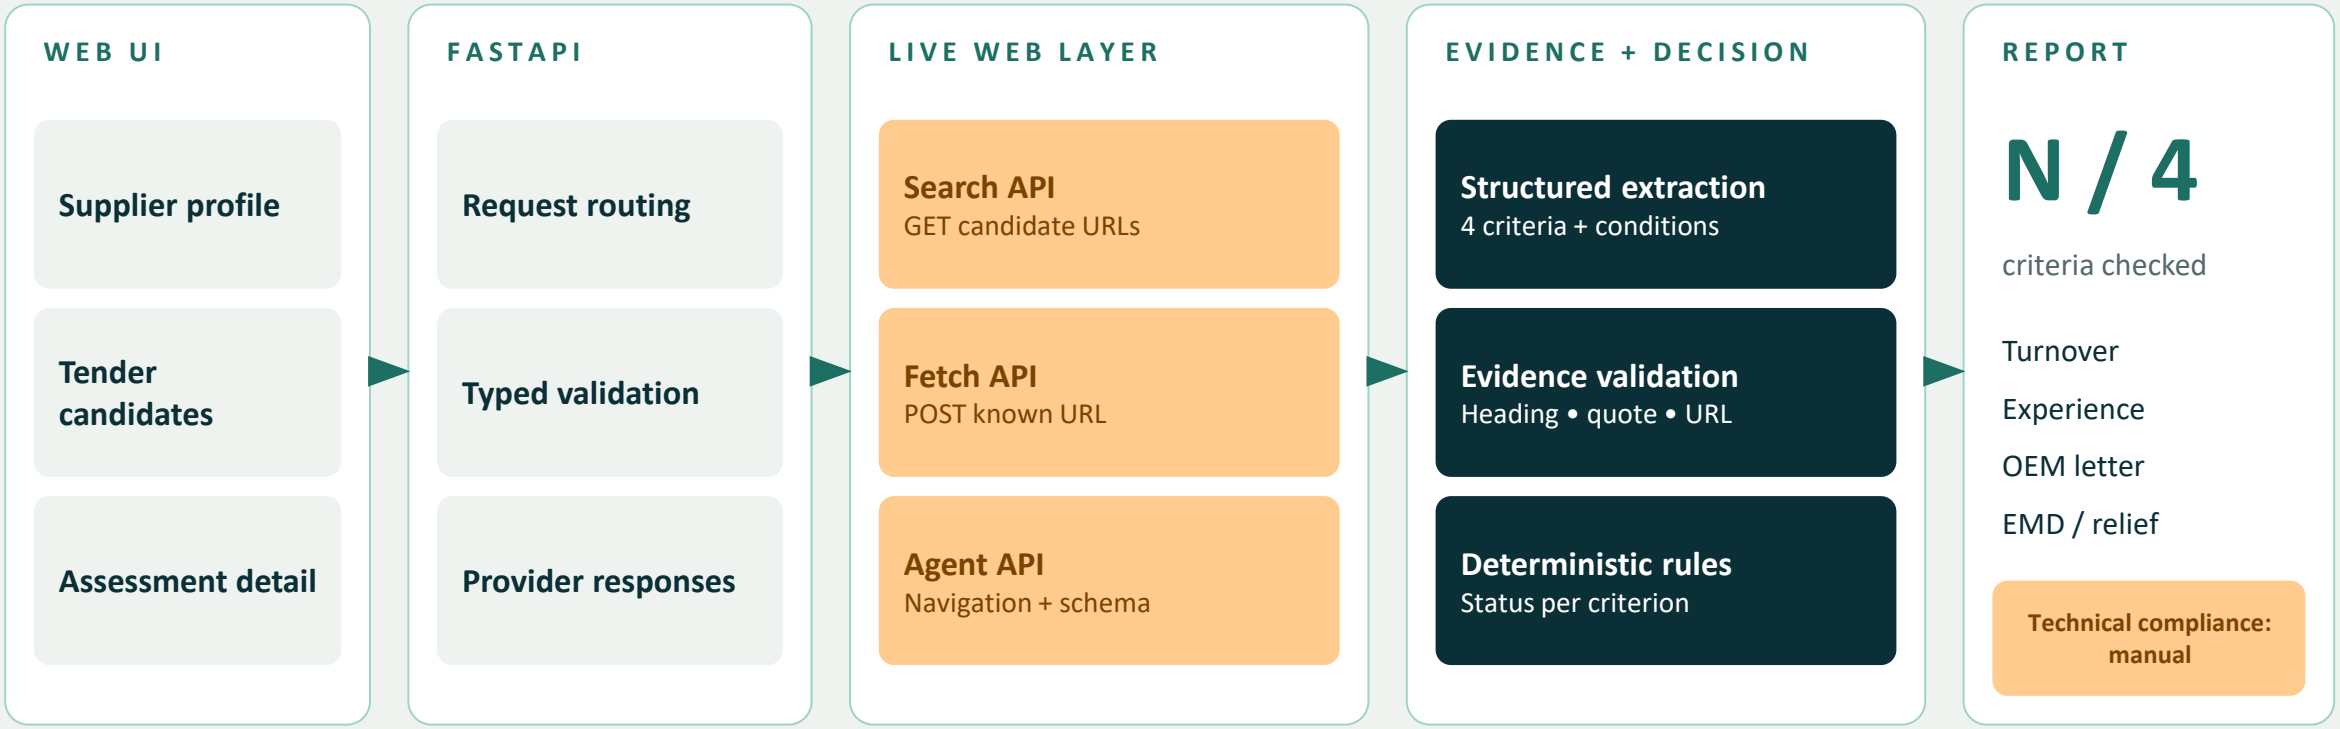

Verdict, reasons, documents, N/4

EXCEPTION PATH Inaccessible source • Invalid quotation • Incomplete or conflicting conditions → **Needs manual review**

The FastAPI backend controls each handoff; TinyFish APIs are not assumed to chain their outputs automatically.

SYSTEM ARCHITECTURE

The backend connects TinyFish APIs to a separate eligibility rules engine

The extraction agent structures evidence. Application code validates it and decides every criterion and overall status.

FastAPI orchestrates separate API calls and passes content between stages; the extraction model never makes the final eligibility decision.

Every result shows the evidence behind it

A schema-valid response is not proof the source was read correctly, so evidence checks and profile matching stay separate.

ASSESSMENT DETAIL — NEEDS MANUAL REVIEW

TENDER CLAUSE	Turnover requirement (hypothetical)
ILLUSTRATIVE REQUIREMENT	Average annual turnover ≥ ₹50 lakh in the illustrative scenario.
SUPPLIER FACT	Northstar reports turnover below the example threshold; financial proof is not verified.
RULE RESULT	UNRESOLVED — actual tender clause and supplier evidence are required.
SOURCE STATUS	Hypothetical scenario; no real tender source is attached.
COVERAGE	0 / 4 fully evidence-checked

Illustrative report only. No real tender clause or official quotation is represented here.

Eligible
All four criteria checked; standard requirements supported.

Eligible with relaxation
A tender-specific relaxation is evidenced and its conditions are met.

Not eligible
A decisive requirement fails; no evidenced relaxation resolves it.

Needs manual review
Evidence is missing, ambiguous, conflicting or out of scope.

Use the verdict only when the evidence and coverage conditions are satisfied.

FAILURE MODES

When the evidence isn’t clean, BidReady says so instead of guessing

Tender pages and PDFs may be incomplete, restricted or unreadable. Each failure must have a visible outcome.

Scanned or image-only PDF	Fetch returns little or no usable text, so the clause can’t be quoted.	NEEDS MANUAL REVIEW
Source blocked or unreachable	Fetch / Agent returns an error. The source link stays visible.	NEEDS MANUAL REVIEW
Quote not found in retrieved text	Evidence validator rejects the finding before any verdict.	CRITERION UNRESOLVED
Conflicting or incomplete conditions	Rules engine can’t decide without guessing.	NEEDS MANUAL REVIEW

SUPPLIER JOURNEY

A reusable profile turns a tender into a supplier-specific review

PROFILE

1

Set profile

Turnover, past orders, OEM letters, EMD readiness and status documents.

TENDER

2

Choose tender

Select a candidate and prioritize the official tender source.

EVIDENCE

3

Check evidence

Tie each requirement to a clause heading, exact quote and source URL.

GAPS

4

Expose gaps

Missing or conflicting evidence stays unresolved.

DECISION

5

Next step

Use the pre-screen before reviewing the full tender and technical terms.

Supplier-declared facts and document-verified evidence must remain distinct.

EVALUATION FRAMEWORK

Evaluate effort, evidence quality and decision reliability

Compare assisted assessments with a manually reviewed reference set; report only observed results.

MEASURE	METHOD	EVIDENCE TO RECORD	WHY IT MATTERS
Review time	Manual vs assisted on the same PDF	Timed run recorded	*Review effort*
Clause extraction	Compare with a manual reference	4 criteria labelled per tender	*Field completeness*
Citation validity	Check each quote against retrieved text	Pass / fail per quote	*Quote traceability*
Decision agreement	Compare with an adjudicated reference	Reasoned disagreements logged	*Decision consistency*
Manual-review handling	Test incomplete / ambiguous cases	Expected vs actual route	*Safe handling of gaps*

Initial evaluation set: three public tender PDFs with different document structures.

DECISION BOUNDARY

BidReady connects tender discovery to supplier-specific eligibility review

STAGE	INPUT	BIDREADY	HUMAN ROLE	OUTPUT
Discovery	Query	Find URLs	Select source	Candidate
Retrieval	Source URL	Fetch / Agent	Check coverage	Source text
Eligibility	Tender + profile	Apply 4 rules	Verify proof	Status
Uncertainty	Missing data	Flag unknown	Review clause	Manual review
Bid decision	**Full tender**	**Pre-screen**	**Decide**	**Bid / no-bid**

BidReady supports the decision; the supplier remains responsible for reviewing the complete tender.

SCOPE LIMIT

AUTOMATED CHECKS

Turnover • prior experience • OEM authorization • EMD and explicitly applicable relaxations

4 criteria

N / 4 checked

Technical specifications, delivery, warranty, certifications and all other tender conditions require manual review.

BUSINESS IMPACT + SCOPE

Start with IT-hardware suppliers and expand only after validation

Suppliers

See which criteria appear met and which documents are missing.

Tender consultants

Organize evidence review across client profiles.

Associations

Help members understand common eligibility gaps.

Support teams

Use one consistent pre-screen before detailed bid work.

POSSIBLE COMMERCIAL MODELS

Subscription
Ongoing access for active suppliers

Pay per assessment
One-off pre-screen for a tender

Team plan
Shared supplier profiles and review

EXPANSION GATES

01 IT hardware Validate retrieval + rules

02 Adjacent equipment Re-test sector clauses

03 Broader categories Expand only with evidence

VALIDATION GATES

Evidence quality must be validated before broader deployment

1 Select real sources

Choose three public tender PDFs with different document shapes.

SOURCES

2 Test retrieval

Inspect returned body text, not only HTTP success or a PDF link.

RETRIEVAL

3 Build reference labels

Manually record the four criteria and exact supporting clauses.

REFERENCE

4 Validate quotations

Check each quote against the retrieved source content.

EVIDENCE

5 Test deterministic rules

Cover pass, conditional relaxation, failure and unknown states.

RULES

6 Measure and compare

Compare manual and assisted review time and decision agreement; record observed results.

EVALUATE

Deployment gate: test retrieval, extraction, evidence validation and rules together on real tender documents.

Use manually labelled references and retain failures; performance claims must come from recorded evaluation.

BidReady makes tender eligibility easier to assess and easier to verify

A focused pre-screen that links supplier facts to tender evidence, surfaces missing proof, and keeps unresolved questions visible.

TRUST STANDARD

Every verdict must trace to the actual tender clause, validated source text and supplier evidence. Missing or contradictory facts trigger manual review.
